

## Together we take research one step further

Information regarding the use of patient data and samples

# We are passionate about research and our hospital.

We take pride in serving our researchers and patients with competence and quality.

#### **Dear Patient**

The diagnosis and treatment of illnesses has progressed significantly in the last few decades. This is the result of long-standing research in which physicians, scientists and patients of several generations have actively participated.

The University Hospital Basel considers itself to be not just a treatment center, but also an important link between research and patients.

Only with your cooperation can we acquire new knowledge in different medical fields and continously improve diagnosis and treatment options.

In accordance with Swiss research legislation, it is mandatory for us to have your written consent in order to use information regarding your illness or samples collected in the context of your treatment for research purposes.

This brochure contains information on how you can contribute to medical progress.

We would like to sincerely thank you for your interest and your support.

an Peuli. May M. Chill-Craz

Prof. Christiane Pauli-Magnus Head of the Department of Clinical Research

Head of the Clinical Trial Unit

Prof. Mirjam Christ-Crain Head of the Department of Clinical Research

Deputy Chief Endocrinology

#### Your consent

During your stay at the University Hospital Basel, we will ask you whether the information regarding your illness and samples that are collected for treatment purposes can be made available for research purposes. Your data will only be used in coded or anonymized form for research purposes. This means it will not contain your name or any personal information. We will provide you with an information sheet on this topic, which summarizes the most important facts.

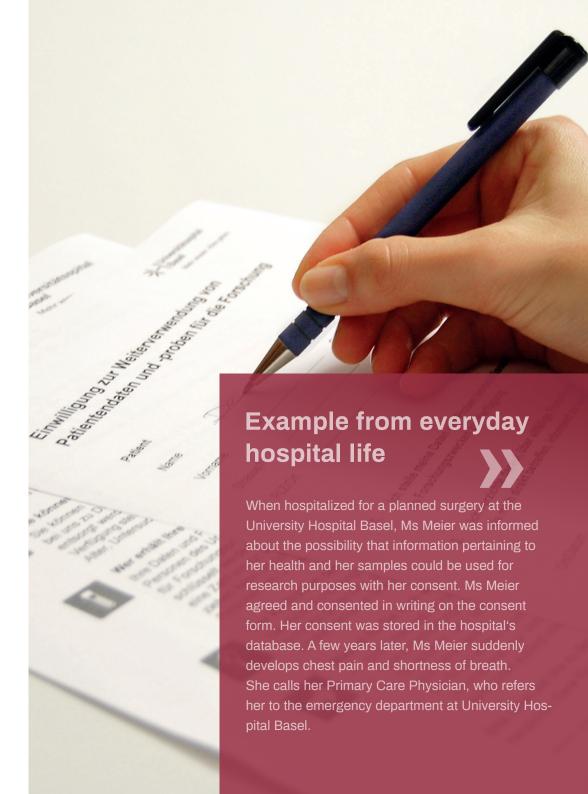

You will then inform us of your decision in writing by signing a consent form. Your decision is voluntary and will have no effect on your treatment. If you consent, the data concerning your health and your samples can be used in the future for research purposes.

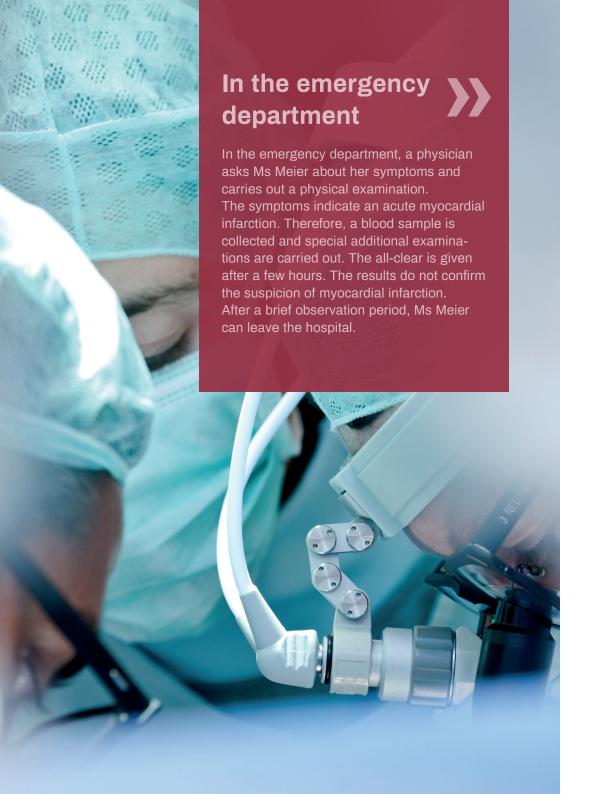

Provided that it is not withdrawn, your consent applies to all data and samples, which have been collected previously or will be collected at the University Hospital Basel. However, if you withdraw your consent, data concerning your health and your samples will not be available for new projects from that date. You do not have to justify your decision.

Please email the address below to withdraw your consent: klinischeforschung@usb.ch

or write to the following address:

Universitätsspital Basel Departement Klinische Forschung Attention: Clinical Research 'Schanzenstrasse 55, CH-4031 Basel

## Examination and sample-collection

Your stay at the University Hospital Basel can have various reasons. For example, it may be that you are here to find the cause of your symptoms, to undergo a specific examination or to receive medication or a surgical treatment. Usually, your medical history will be recorded and samples will be taken, where necessary. Both can be made available for research purposes with your consent.

Additional examinations are often necessary for your treatment, such as

- taking a blood / urine or tissue sample.
- carrying out an X-ray or CT.
- carrying out an organ examination, for example a gastroscopy or colonoscopy.

Your medical history and your examination results are usually archived when you leave the hospital. Some samples are disposed of (for example blood samples), and others are routinely stored (for example tissue samples). With your consent, your samples and your particular medical history can supply valuable information to answer new research questions.

## **Evaluation and further use**

During your hospital stay, your data and samples will be available in an uncoded format. Only authorized and clearly designated persons at the University Hospital Basel, like your physician for example, have access to the uncoded data and samples. All these persons are bound by professional secrecy. If your data and samples are used in a research project, they must be coded or anonymized by the University Hospital Basel.

Coded means that all information that can be traced back to you, such as your name or your date of birth, is replaced by a code. The code must always remain at the University Hospital Basel. Persons who do not have the code are not able to identify you.

The researchers may work in Swiss or international institutions such as hospitals, colleges or pharmaceutical companies. Research projects are diverse and might include genetic analyses. However, outside of Switzerland the legal requirements regarding data protection must be at least as high as in Switzerland.

In addition, research projects with coded data must be approved in advance by the competent ethics committee. This does not apply to research projects involving anonymized data and samples. In case of anonymization, the link between the biological material and/or associated data and the participant is permanently removed, so they can no longer be traced to a specific person.

### Research for future generations

The data and samples made available by Ms Meier and other patients have led to important findings. A new laboratory value was found that allows a quicker and more reliable differentiation between an acute myocardial infarction and harmless chest symptoms. The results will be further confirmed in subsequent studies. Future generations of patients will benefit from this new knowledge by receiving more rapid diagnosis and treatment.

#### **Future benefits**

The results of research projects are generally published: they are instrumental for advances in medicine. The knowledge gained from research allows us to better diagnose existing and future illnesses of patients and contributes to continuous improvement in their treatment.

Research carried out with your samples and data will generally not reveal any individual information about your health. If research results might be relevant for your own health and clinical action might be possible, we might contact you.

Neither you nor the University Hospital is entitled to a share of the profits, for example from a new medication. It is legally prohibited for the University Hospital Basel to make money by selling your data and samples.
